LABOR

BrandTech™ Precision Welding lets two people do the work of 16 stick welders

The data proves it. With BrandTech™ Precision Welding, our computer-driven stud-welding technology, a two-person crew can complete as many welds in a 12-hour shift as a 16-person crew using conventional techniques. That's two people, 2,600 welds per shift and only a 0.5% error rate.

See how BrandTech Precision Welding can dramatically cut your labor costs in refractory, insulation and fireproofing services while improving speed and accuracy at BrandTechWelding.com.
