

# Industrial Cleaning Services .....

## Clean & Disinfect Worksites for COVID-19 Response

Now more than ever, it is vital to maintain clean and disinfected worksites, and BrandSafway's industrial cleaning services can help. With an industry-leading safety culture, broad experience and approved disinfectants per the Centers for Disease Control and Prevention (CDC) and the Environmental Protection Agency (EPA) guidelines, we have the expertise you need.

### Clean and disinfect high-contact surfaces and common areas, such as:

- › Lunchrooms
- › Workstations
- › Conference rooms
- › Light switches
- › Doorknobs and handles
- › Bathroom fixtures
- › Stairwell rails and handles
- › Telephones
- › Keyboards, printers, copiers and other electronic equipment

BrandSafway's cleaning and disinfecting procedures and biohazard programs are based off of the most current research from EPA and CDC guidelines.

At Work For You™

## › Experience, Training & Site-Specific Exposure Control Plans

BrandSafway has developed a comprehensive, flexible process for its cleaning and disinfecting services, which includes a site-specific Exposure Control Plan (ECP) to provide verification that the proper precautions have been implemented. The ECP establishes appropriate procedures for decontamination, entry and exit, using personal protective equipment (PPE), mixing and applying chemicals, waste disposal and training. Each ECP must also be reviewed and approved by one of our directors of environment and health prior to commencing work. Our directors have 50-plus years of safety, environmental and industrial hygiene experience across a broad range of expertise and industries, including asbestos and lead abatement, hazardous waste clean-ups, mold remediation, biohazard evaluations, and environmental testing.

**All BrandSafway employees who perform cleaning and disinfecting services have been trained by our Environmental – Industrial Hygiene Department. Training includes:**

- › Health hazards of exposure to biohazards including COVID-19
- › Work methods to minimize exposure
- › Bloodborne pathogen training
- › Decontamination practices
- › Donning and doffing PPE
- › Respirator training and fit test

### **Cleaning vs. Disinfecting**

All surfaces must be cleaned prior to disinfecting. Disinfecting requires using EPA-registered chemicals and allowing sufficient time for viruses and germs to be killed in compliance with CDC guidelines. BrandSafway provides both cleaning and disinfecting services.

### **Comprehensive Expertise**

BrandSafway has expertise in similar, even more stringently regulated services such as abatement, and if our cross-trained teams recently worked at your site, they're already badged and familiar with its layout for greater efficiency.
